

**Specification Amendment**

Please amend the specification by adding the following paragraph after the second full paragraph on page 45 of the substitute specification filed on October 31, 2005. (This paragraph is only needed to provide support for dependent claim 90.)

In some embodiments, the user may select a link that he or she wishes to preload, and this can be done by selecting a button that corresponds to the desired link. In other embodiments, selecting the link that the user wishes to preload can be done in a number of other ways. For example, selection of a link to preload could be carried out by simply passing the mouse or pointing device cursor over the desired link or over an object that corresponds to the link. Such an action could communicate to the document viewing program the link that the user wishes to preload. In another embodiment, the user could select the desired link with a right mouse click (or some other keyboard or pointing device action), or by directing the document viewing program to preload a given link by selecting an appropriate option from a menu that is displayed when the link is selected with the pointing device.
